Power Paks

Important, please read: We pioneered the PowerPak concept in the V6 community through extensive dyno testing. PowerPaks are our specialty; they are more than just heads, intakes, and a cam--they are part of a comprehensive engine system where each component has been designed and tested to work together. These parts are also available separately so you can build your own PowerPak as budget allows. Superchargers, nitrous and turbos are very popular power adders, but there's no denying that they often cause harmful engine stress and catastrophic failure of the stock hypereutectic pistons and stock powder metal rods. If your car is your daily driver, you want added power without fear of catastrophic engine failure, our PowerPaks may be just the solution you are looking for...

Extra power without the harmful engine stress of superchargers, turbos, nitrous!

99-up 3.8 V6 Mustang 97-00 4.2 V6 F-150

Ported upper intake, ported lower intake, Stage 3 heads, SSM custom ground billet cam: **\$2895*** adds up to 80 horsepower, saves \$!
