Ported Cyclone EcoBoost Cylinder Heads

Extensive port development and flow bench testing of the heads and lower intake manifold led to impressive flow numbers of our Stage 1 Cyclone & EcoBoost cylinder heads. If you are looking for BIG power from your Cyclone or EcoBoost, these are the heads you'll need. Available with multiple purchase methods for your convenience to minimize down time.

Stage 1: Fully ported and polished intake ports matched to ported lower intake manifold, minimized port protrusions. Fully ported, polished and gasket matched exhaust ports, shortened exhaust valve guides. Unshrouded & polished combustion chambers, 1.45 / 1.22 valves. Surfaced, fresh valve job, valve seals and valve springs, assembled (not including cams or buckets). 204cc intake ports increase flow an amazing 21% to 317CFM. 95cc exhaust ports increase flow over 35% to an outstanding 260CFM.

Price & purchase methods:

\$2050 per set with customer supplied cores
\$2650 per set including \$600 refundable core exchange fee if heads not provided by customer
\$3750 per set if purchased outright using new Ford cylinder head cores, all new, no core fees!

SSM Cyclone EcoBoost Stage 1 Cylinder Heads
